

Flush Fit Cable Restrictor

Part Number: WR 7204

Product Information

The Schlosser Technik cable restrictor is designed with safety and security in mind. The basic principle of the restrictor is to reduce the risk of falling out of open windows. The restrictor also provides a secondary form of window and/or door security. With a high quality design and build, the versatile restrictor can be used for a number of applications.

When engaged, the Schlosser Technik cable restrictor allows windows to be opened to approximately 100mm which complies with UK safety regulations.

The Schlosser Technik cable restrictor is an economic solution, perfect for new windows and also for retro fitting for existing installations. Fitting is quick and simple.

The Schlosser Technik Cable restrictor is suited to hospitals, care homes, hotels, schools, nurseries, universities and domestic homes where particularly vulnerable users may be at risk of falling out of windows. For example, children at schools or home.

With a range of quality finishes, the Schlosser Technik Cable restrictor can be matched to existing window handle or sash colours and finishes. The design is neat, compact and contemporary unlike other 'bulky' restrictors currently on the market.
